Clean code attribute ▾

Search by name...

- Code Smell
- Initialization formals shouldn't be unnecessarily type annotated
- Triple slash should be used for documentation comments
- Adjacent string concatenation should be preferred
- Non-constant names should comply with a naming convention
- Void functions should not return null
- Function declarations should be preferred over variables
- Extension identifiers should comply with a naming convention
- Local identifiers should not start with underscore
- If-null operator should be preferred
- Null-aware operators should be preferred
- Generic function type aliases should be preferred

Adjacent string concatenation should be preferred

Analyze your code

Consistency - Conventional Maintainability

Code Smell Minor convention

Prefer adjacent string concatenation over using the + operator.

Why is this an issue? How can I fix it? More Info

Remove the + operator to have string literals adjacent to each other.

Code examples

Noncompliant code example

```
String message = 'Hello' + 'World';
```

Compliant solution

```
String message = 'Hello' 'World';
```
