Extend C# Dev Kit with tools for building .NET Multi-platform App UI (MAUI) apps

[Install](#)[Trouble Installing?](#) [Overview](#)[Version History](#)[Q & A](#)[Rating & Review](#)

.NET MAUI extension for VS Code

The .NET Multi-platform App UI (MAUI) extension gives you the tools you need to build beautiful, performant, cross-platform apps anywhere you write code. It's built on top of the [C#](#) and [C# Dev Kit](#) extensions, which supercharge your .NET development with powerful IntelliSense, an intuitive Solution Explorer, package management, and more. This extension adds more features for .NET developers building multi-platform apps, including:

- Hit F5 to debug your app on emulators, simulators, and devices
- Switch between different startup projects and target frameworks
- Write your cross-platform C# and XAML anywhere VS Code runs

Quick Start

1. Install the .NET MAUI extension (The [C#](#) and [C# Dev Kit](#) extensions will automatically be installed as dependencies)
2. (a) Open a folder/workspace that contains a .NET MAUI project or solution (.csproj or .sln),
OR
(b) Use the Solution Explorer's "Create .NET Project" button or Command Palette's ".NET: New Project.." and choose a .NET MAUI project type
3. Select your debug target by hovering over the curly braces `{ }` next to C# or XAML in the status bar, then hit F5!

Feature List

- Debug your .NET MAUI app on any supported* emulator, simulator, or device

- Easily change debug/deploy targets and build for all .NET MAUI platforms
- Leverage all of the features in [C# Dev Kit](#) including Solution Explorer, Test Explorer, code navigation and refactoring, and Roslyn-powered language features
- Edit your XAML UIs with syntax highlighting and IntelliSense code completion
- Apply XAML and C# changes without restarting your app, using Hot Reload

*Supported Debug Targets

Your Operating System	Supported Target Platforms
Windows	Windows, Android
macOS	Android, iOS, macOS
Linux	Android

You can build without running (to check for compilation errors) for all target platforms on any OS.

Requirements

- .NET 7 or greater with .NET MAUI workload
- Activated [C# Dev Kit](#) extension with a valid [Visual Studio or IntelliCode subscription](#)
- Building for Android requires an Android SDK ([Learn how to get set up](#))
- Building for iOS and macOS requires the latest Xcode ([Learn how to get set up](#))

Known Limitations

Please give us [your feedback](#) on other features you'd like to see as we continue building this new experience!

- Currently, you can't switch the target framework for IntelliSense (it will show syntax highlighting for only the first target framework listed in your .csproj file). This capability is in progress
- C# Hot Reload is currently off by default. To enable it, in **Preferences: Open User Settings** search for **Hot Reload** and check **[Experimental] Enables Hot Reload while debugging**. Click the "Fire" icon in the debug toolbar while the app is running to apply code changes. C# Hot Reload with Android and WinUI should work, but iOS/Catalyst aren't yet supported.
- If, when attempting to create a new MAUI project there are no project templates, [installing the latest MAUI workload](#) and resarting VS Code should provide them.

Found a bug?

To file a new issue, go to VS Code **Help > Report Issue**. In the Issue Reporter dialog, select "An extension" and ".NET MAUI" in the relevant dropdowns. Submitting this form will automatically generate a new issue in the C# Dev Kit GitHub repo.

Alternatively, you can file an issue directly in the [C# Dev Kit GitHub Repo](#).

Feedback

? [FAQs](#) Please read the FAQs before filing a question

 [Provide feedback](#) File questions, issues, or feature requests for the extension

 [Known issues](#) If someone has already filed an issue that encompasses your feedback, please leave a 👍 reaction to upvote it and help us prioritize the issue

 [Quick survey](#) Let us know what you think of the extension by taking our quick survey
