.NET MAUI Tutorial - Build your first multi-platform app in C#

Windows macOS

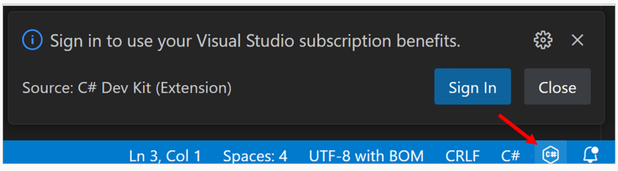
Introduction
Download and install
Create your app
Run your app
Edit your code
Run on mobile device
Next steps

Create your app

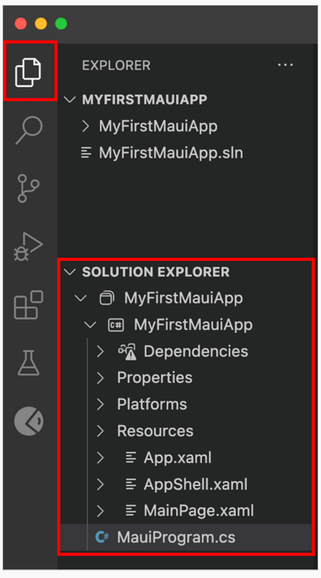
Create a new .NET MAUI app:

1. Open the command palette in VS Code by pressing `CMD` + `SHIFT` + `P`.
2. Type **.NET:** to see the commands you can run with C# Dev Kit!
3. Find and select **.NET: New Project** to create a new .NET project.
4. Select **.NET MAUI App**.
5. Choose the folder location you'd like to save your project.
6. Name the project **MyFirstMauiApp** in the command palette when prompted.

If you have a Visual Studio Subscription, sign into your account. If you don't see a prompt pop up, click on the **C#** icon in VS Code's Status Bar towards the bottom right of your window.



In VS Code's Side Bar, make sure the **Explorer** is open. Here you should see a folder and the **Solution Explorer**. If you've opened a new instance of VS Code, the **Solution Explorer** may be near the bottom of the sidebar.



Under the **Solution Explorer**, select `MainPage.xaml`. This file contains the markup that describes the structure and layout of the user interface elements in your MAUI application.
