.NET MAUI Tutorial - Build your first multi-platform app in C#

Windows macOS

Introduction

Download and install

Create your app

Run your app

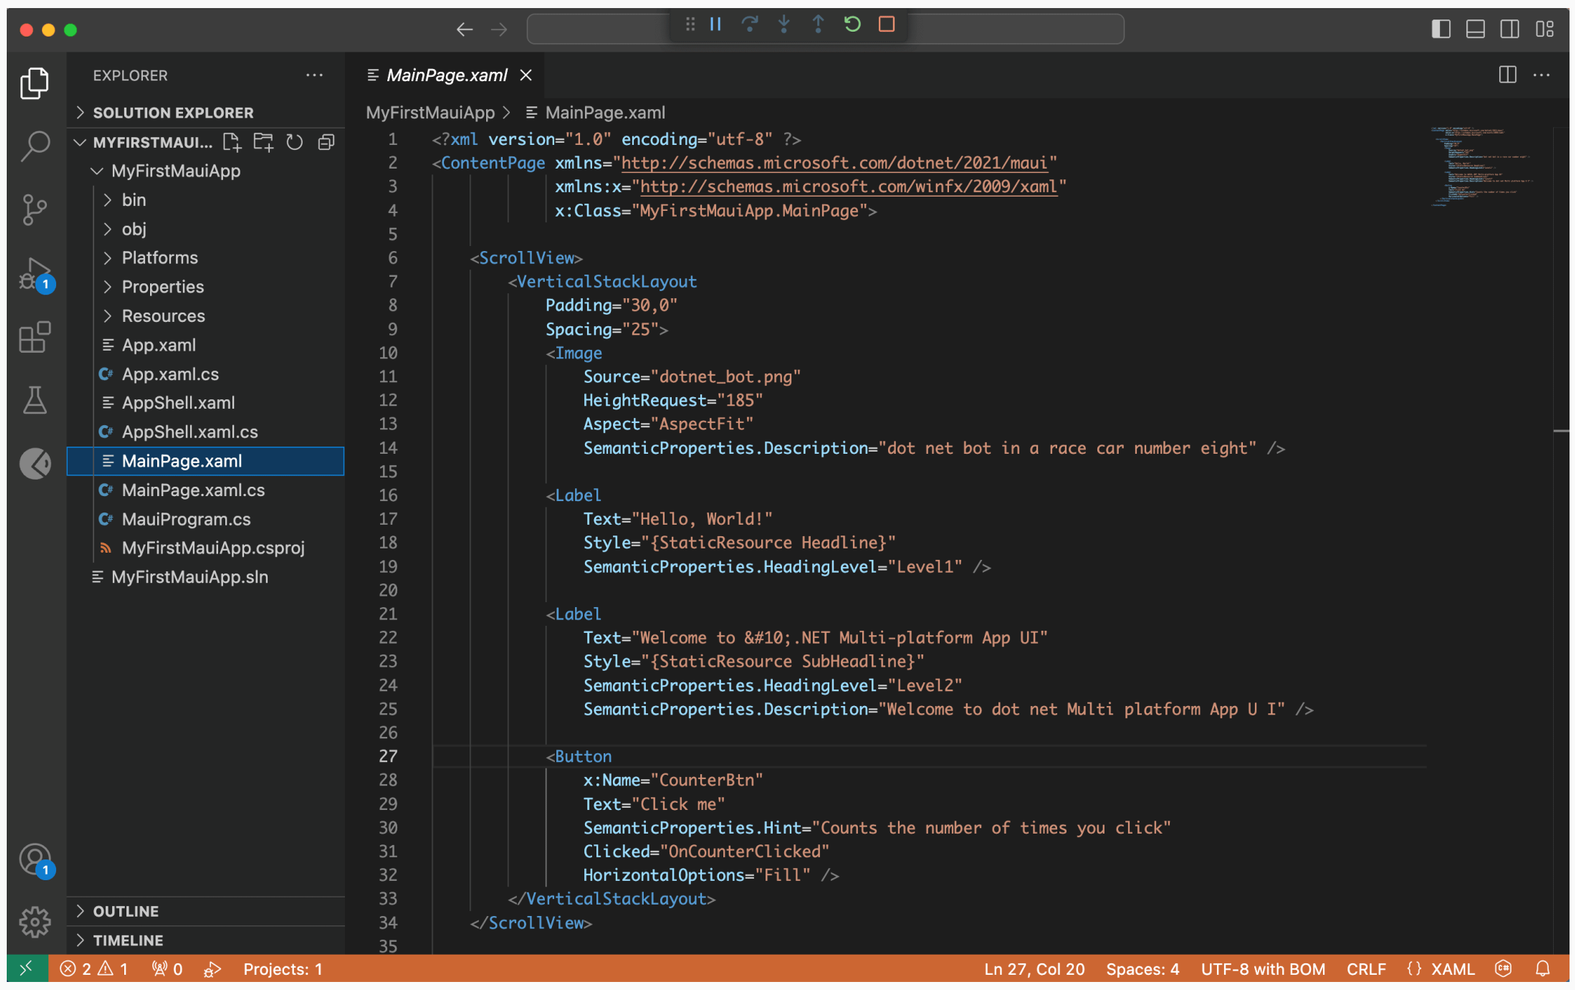

Edit your code

Run on mobile device

Next steps

Edit your code

Go back to the `MainPage.xaml` file in VS Code and leave the app running.

Currently, the `Text` of the second `Label` on line 17 is set to say `Hello, World!` as shown in the following code:

MainPage.xaml — Copy

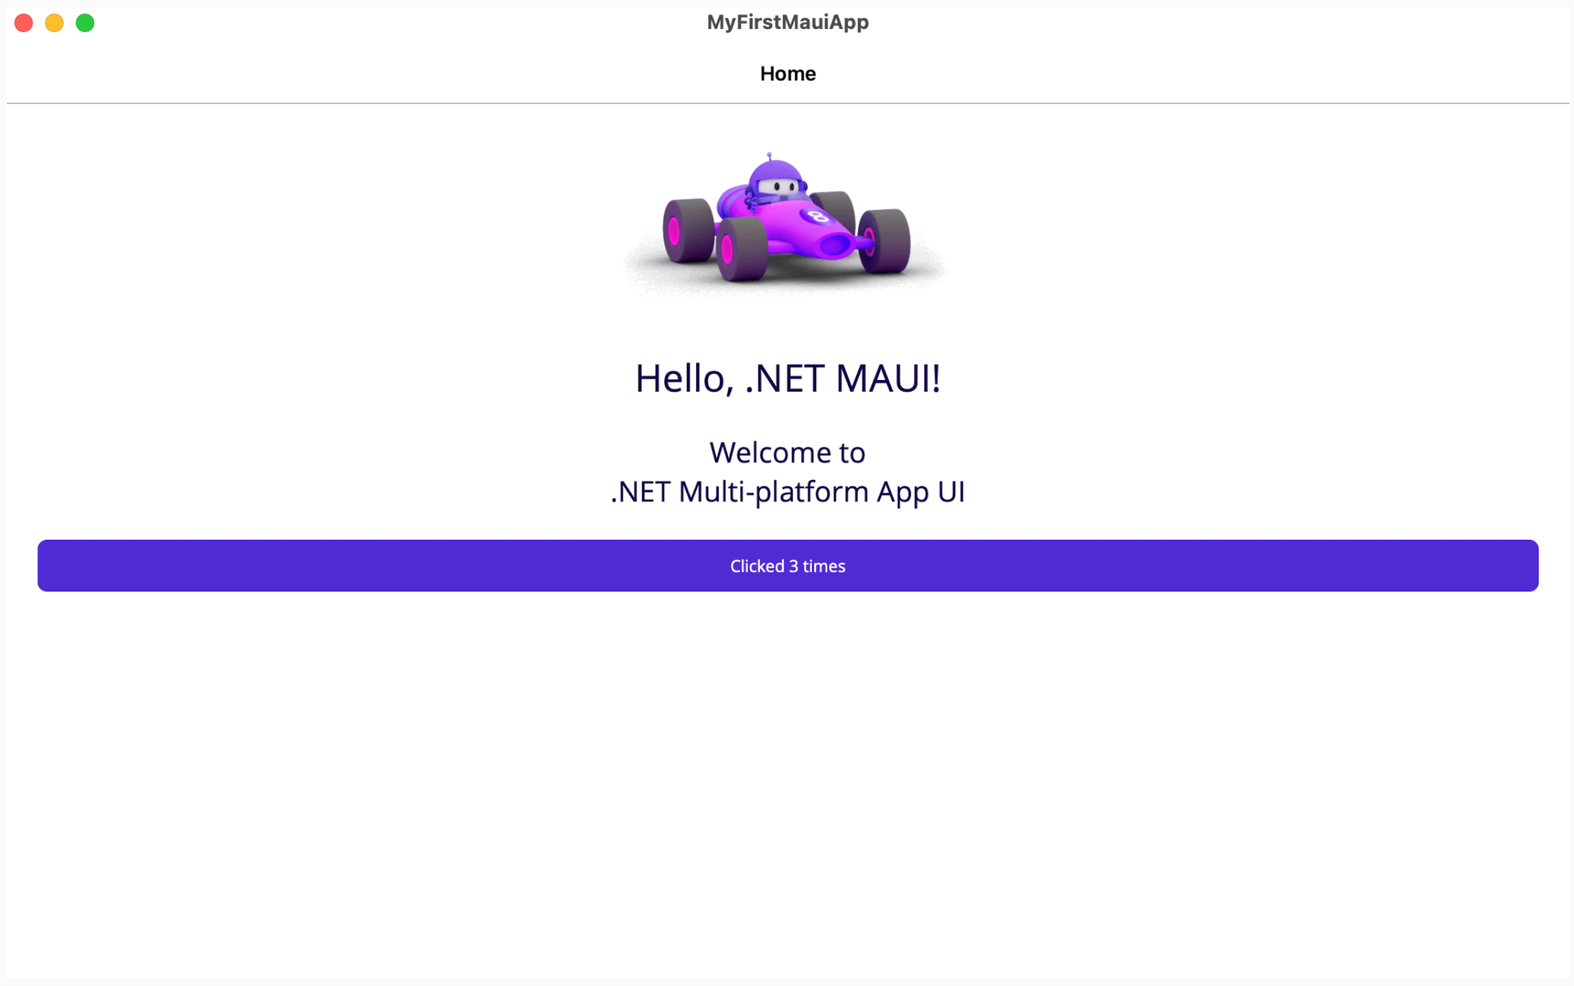

```
<Label
    Text="Hello, World!"
    Style="{StaticResource Headline}"
    SemanticProperties.HeadingLevel="Level1"  />
```

Update the text to read `Hello, .NET MAUI!`:

MainPage.xaml — Copy

```
<Label
    Text="Hello, .NET MAUI!"
    Style="{StaticResource Headline}"
    SemanticProperties.HeadingLevel="Level1"  />
```

The app UI updates automatically as you make changes.
