

.NET MAUI Tutorial - Build your first multi-platform app in C#

Windows

macOS

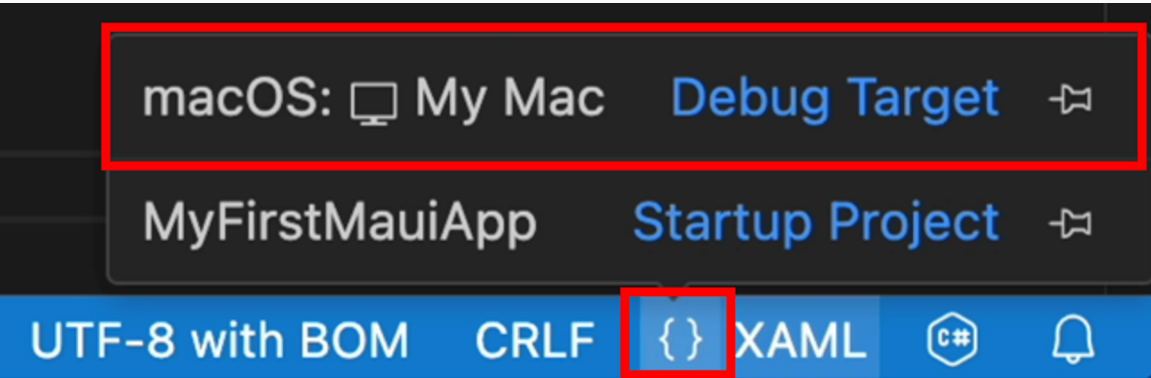

- Introduction
- Download and install
- Create your app
- Run your app
- Edit your code
- Run on mobile device
- Next steps

Run on mobile device

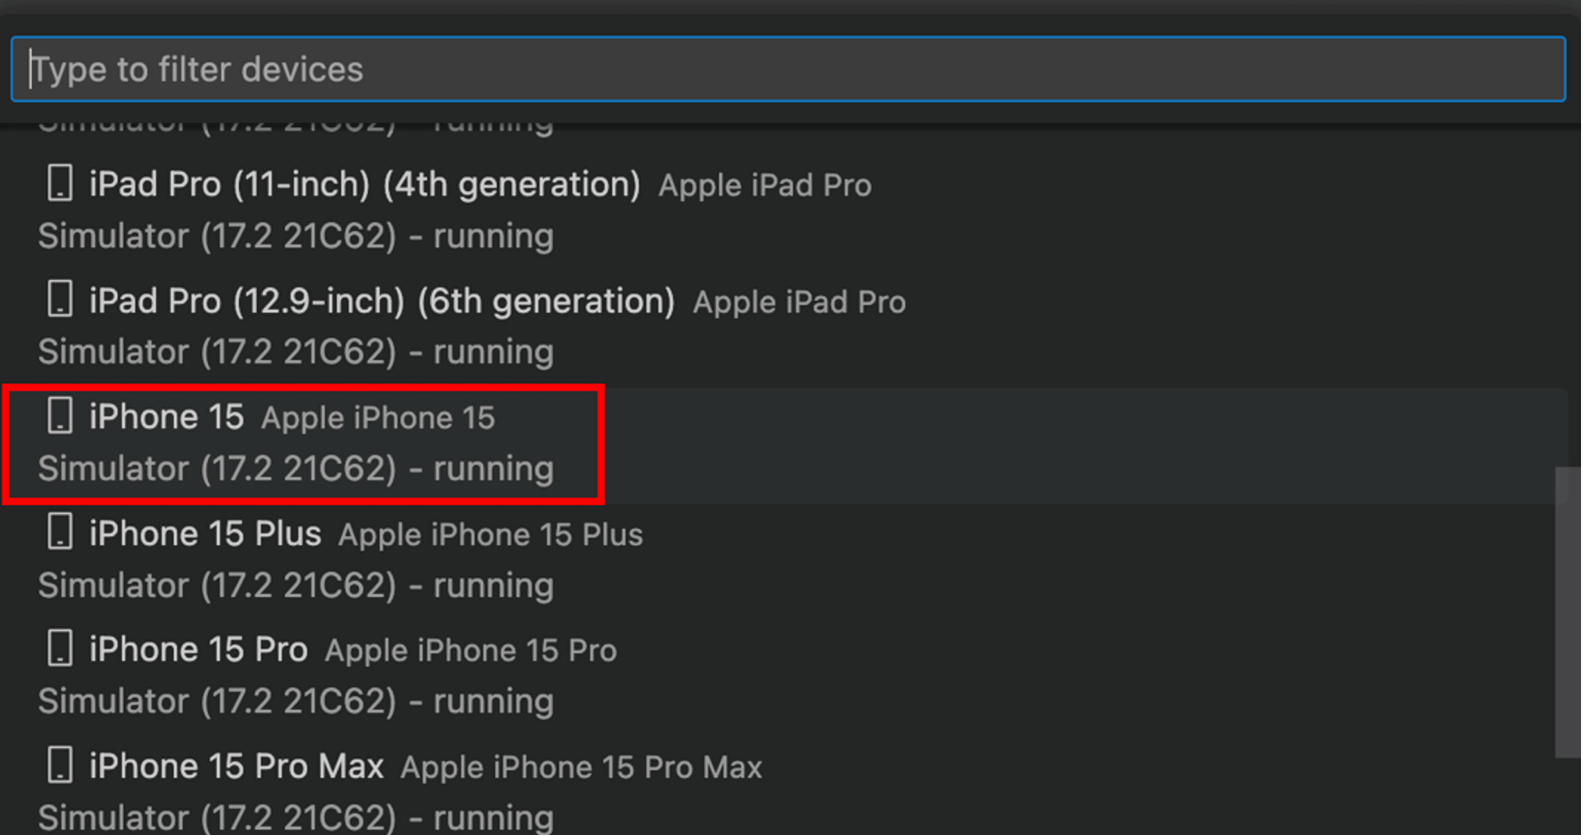

You can deploy to one or more of the platforms based on your development environment. You just ran and deployed your app to macOS. Now, let's deploy to iOS.

Close the .NET MAUI application you had running and return to VS Code.

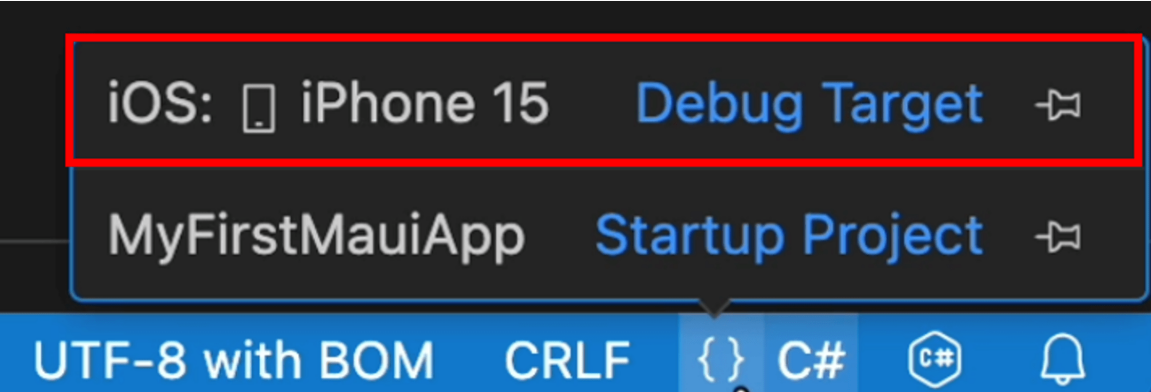

Click on the curly braces in the bottom right of the VS Code window in the Status Bar and select **Debug Target**.

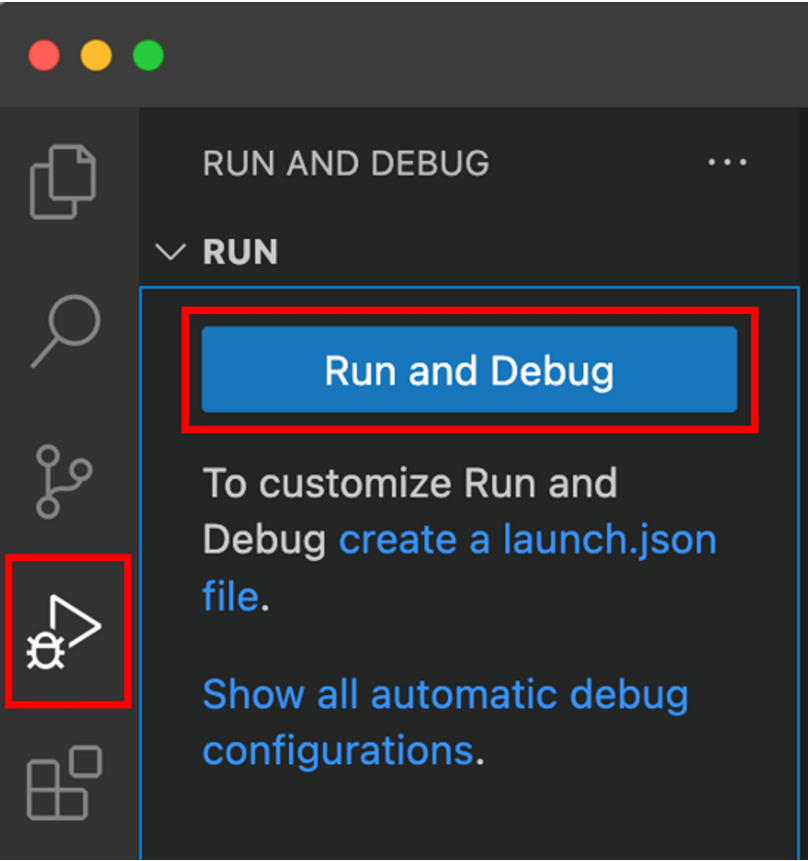

Scroll down and select **iPhone 15**.

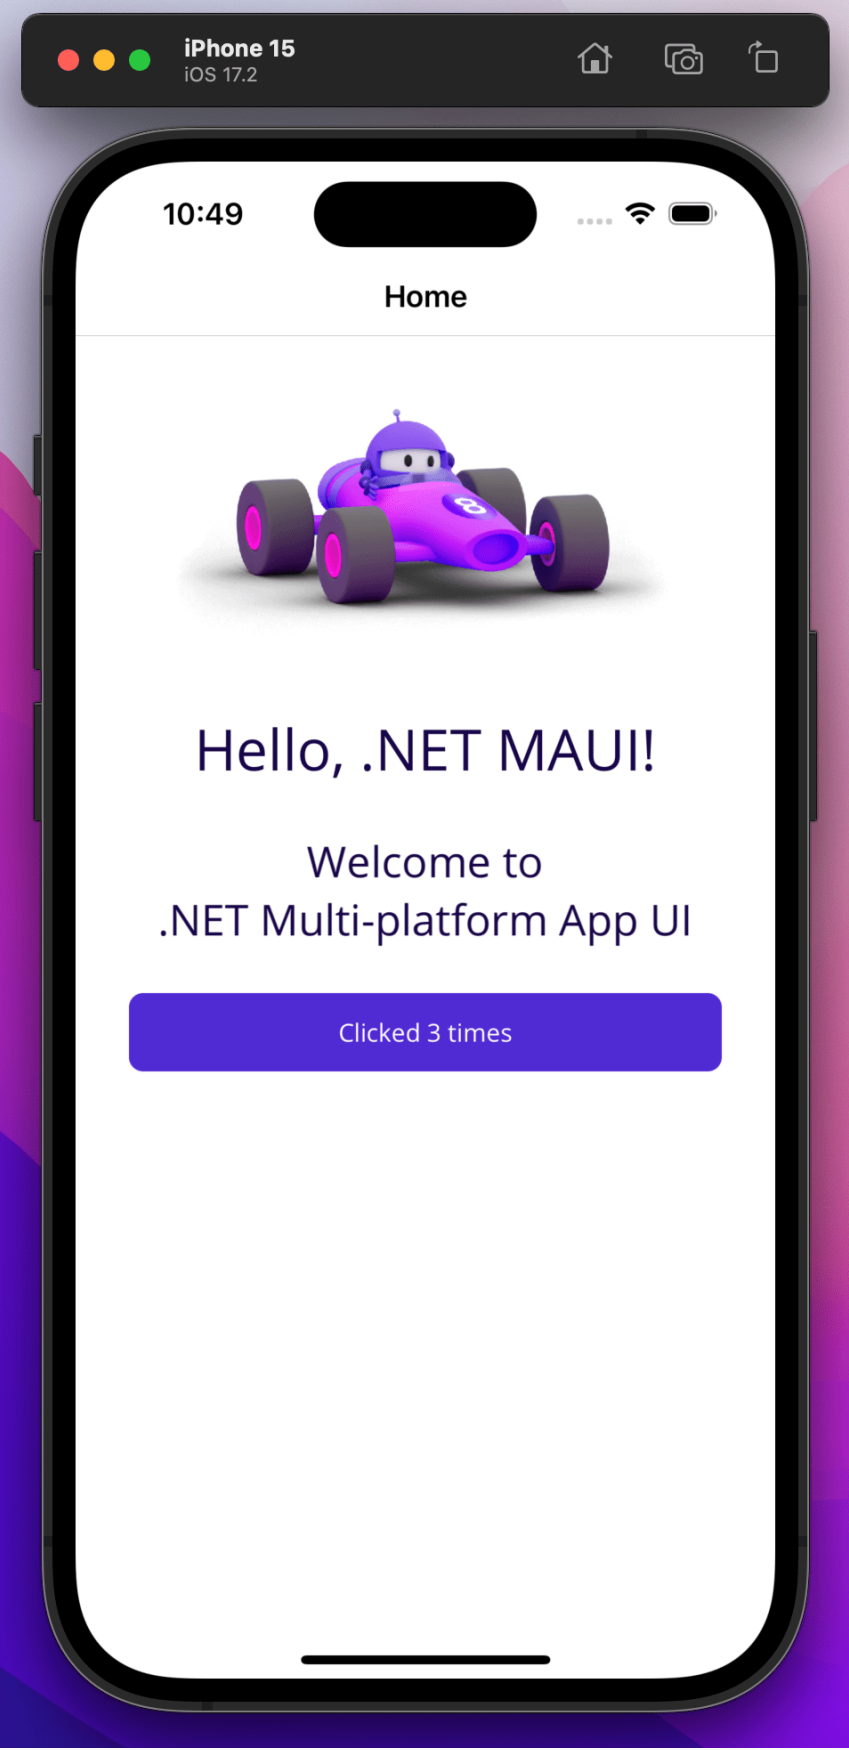

You should now see **iOS: iPhone 15** as the new debug target.

To run the app, click the **Run and Debug** icon in the VS Code Activity Bar. Then click **Run and Debug**.

Your application will build and deploy to the iPhone simulator. Please note this may take a minute, it is virtually turning on an iPhone!
