Search by name... 🔍

Class names should comply with a naming convention
 Code Smell
Track uses of "TODO" tags
 Code Smell
Deprecated code should be removed
 Code Smell
Cyclomatic Complexity of functions should not be too high
 Code Smell
Constant names should comply with a naming convention
 Code Smell
Unnecessary nullable in final declaration should be removed
 Code Smell
Dependencies should be sorted
 Code Smell
Unused assignments should be removed
 Code Smell
Standard outputs should not be used directly to log anything
 Code Smell
Variables should not be initialized with "null"
 Code Smell
Files should end with a newline
 Code Smell

Constant names should comply with a naming convention

Analyze your code

Consistency - Identifiable Maintainability 

 Code Smell  Critical   convention

Why is this an issue? How can I fix it? More Info

Update the name of the constant to match the convention (lowerCamelCase), as well as all usages of the name. For many IDEs, you can use built-in renaming and refactoring features to update all usages of a constant at once.

Code examples

Noncompliant code example

```
class MyClass {
  const PI = 3.14159; // Noncompliant
  const MY_CONSTANT = 42; // Noncompliant
}
```

Compliant solution

```
class MyClass {
  const pi = 3.14159;
  const myConstant = 42;
}
```
