Dart static code analysis

Unique rules to write Clean DART Code

All rules **115**  Bug **15**  Code Smell **100**

Tags ▾

Impact ▾

Clean code attribute ▾

Search by name... 

Unnecessary imports should be removed

Empty statements should be removed

Class names should comply with a naming convention

Track uses of "TODO" tags

Deprecated code should be removed

Cyclomatic Complexity of functions should not be too high

Constant names should comply with a naming convention

Unnecessary nullable in final declaration should be removed

Dependencies should be sorted

Unused assignments should be removed

Standard outputs should not be used directly to log anything

Deprecated code should be removed

Intentionality - Clear **Maintainability** ▾
 Code Smell  Info  obsolete

Why is this an issue?

This rule is meant to be used as a way to track code which is marked as being deprecated. Deprecated code should eventually be removed.

Noncompliant code example

```
class Foo {  
  
    @deprecated                                // Noncompliant  
    void foo() {  
    }  
  
    @Deprecated("Use baz instead") // Noncompliant  
    void bar() {  
    }  
  
    void baz() {                                // Compliant  
    }  
}
```
