 Code Smell

 Minor ⓘ

 convention

Why is this an issue?

More Info

Shared coding conventions allow teams to collaborate effectively. For that reason, file names should conform to a defined standard. In Dart the convention is to name files using lowercase with underscore.This rule raises an issue when the names of analyzed files don't match this convention.

This convention also helps to operate with different file systems, which may be case-insensitive.

These file names will violate convention:

- MyFile.dart
- myFile.dart
- my-file.dart
- My_File.dart

And the proper name in this case will be:

- my_file.dart
