Dart static code analysis

Unique rules to write Clean DART Code

All rules **115**  Bug **15**  Code Smell **100**

Overriding methods should do more than simply call the same method in the super class

 Code Smell

"isEmpty" or "isNotEmpty" should be used to test for emptiness

 Code Smell

Unnecessary imports should be removed

 Code Smell

Empty statements should be removed

 Code Smell

Class names should comply with a naming convention

 Code Smell

Track uses of "TODO" tags

 Code Smell

Deprecated code should be removed

 Code Smell

Cyclomatic Complexity of functions should not be too high

 Code Smell

Constant names should comply with a naming convention

 Code Smell

Unnecessary nullable in final declaration should be removed

 Code Smell

Dependencies should be sorted

 Code Smell

Overriding methods should do more than simply call the same method in the super class

Analyze your code

Intentionality - Clear

Maintainability ▾

 Code Smell  Minor   redundant clumsy

Why is this an issue?

More Info

Overriding a method just to call the overridden function from the base class without performing any other actions can be useless and misleading.

There are cases when it is justified because redeclaring the function allows some side effects:

- if a type (return type or a parameter type) is not exactly the same as the super member
- if the covariant keyword is added to one of the parameters
- if documentation comments are present on the member
- if the member has annotations other than `@override`
- if the member is not annotated with `@protected`, and the super member is

Noncompliant code example

```
class Child extends Parent {
  @override
  void foo() {
    super.foo();
  }
}
```

Compliant solution

```
class Child extends Parent {
  @override
  void foo() {
    bar();
  }
}
```
