Dart static code analysis

Unique rules to write Clean DART Code

All rules **115**  Bug **15**  Code Smell **100**

Unnecessary imports should be removed		Code Smell
Empty statements should be removed		Code Smell
Class names should comply with a naming convention		Code Smell
Track uses of "TODO" tags		Code Smell
Deprecated code should be removed		Code Smell
Cyclomatic Complexity of functions should not be too high		Code Smell
Constant names should comply with a naming convention		Code Smell
Unnecessary nullable in final declaration should be removed		Code Smell
Dependencies should be sorted		Code Smell
Unused assignments should be removed		Code Smell
Standard outputs should not be used directly to log anything		Code Smell

 Code Smell  Minor   unused

Why is this an issue? How can I fix it? More Info

Unnecessary imports refer to importing types that are not used or referenced anywhere in the code.

Although they don't affect the runtime behavior of the application after compilation, removing them will:

- Improve the readability and maintainability of the code.
- Help avoid potential naming conflicts.
- Improve the build time, as the compiler has fewer lines to read and fewer types to resolve.
- Reduce the number of items the code editor will show for auto-completion, thereby showing fewer irrelevant suggestions.
