Search by name...

"this" should only be used when required

Code Smell

Exceptions should not be ignored

Code Smell

Code annotated as deprecated should not be used

Code Smell

File names should comply with a naming convention

Code Smell

Unused local variables should be removed

Code Smell

Package names should comply with a naming convention

Code Smell

Overriding methods should do more than simply call the same method in the super class

Code Smell

"isEmpty" or "isEmpty" should be used to test for emptiness

Code Smell

Unnecessary imports should be removed

Code Smell

Empty statements should be removed

Code Smell

Class names should comply with a naming convention

Code Smell

Track uses of "TODO" tags

"this" should only be used when required

Analyze your code

Consistency - Conventional Maintainability ▾
 Code Smell Minor clumsy

Why is this an issue? More Info

The use of `this` is optional except when redirecting to a named constructor, and when it's needed to distinguish between property names and arguments or other variables. For the sake of brevity, `this` should be omitted when it's not strictly required.

Noncompliant code example

```
class Car {
  int color;

  Car(this.color); // Mandatory to distinguish between 'color' property and 'color' parameter

  void fade() {
    this.color--; // Noncompliant
  }
}
```

Compliant solution

```
class Car {
  int color;

  Car(this.color); // Mandatory to distinguish between 'color' property and 'color' parameter

  void fade() {
    color--;
  }
}
```
