Search by name...

Function declarations should be preferred over variables

Code Smell

Extension identifiers should comply with a naming convention

Code Smell

Local identifiers should not start with underscore

Code Smell

If-null operator should be preferred

Code Smell

Null-aware operators should be preferred

Code Smell

Generic function type aliases should be preferred

Code Smell

Type parameters should not shadow other type parameters

Code Smell

"static final" declarations should be "const" instead

Code Smell

Interpolation should be used instead of String concatenation

Code Smell

Collection literals should be preferred

Code Smell

Conditional assignment should be preferred

Code Smell

"this" should only be used when required

Function declarations should be preferred over variables

Analyze your code

Consistency - Conventional **Maintainability** ▾

Code Smell Minor convention

Function declarations should be used, instead of variables.

Why is this an issue? **How can I fix it?** More Info

Replace the variable assignment with a function declaration that:

- has the same name as the variable being replaced
- has the same parameters as the function expression assigned to the variable
- has the same return type as the function expression assigned to the variable

Code examples

Noncompliant code example

```
void myFunction(String prefix) {
  var printStrings = (String s1, String s2) {
    print('$prefix: $s1[${s1.length}] $s2[${s2.length}]');
  };

  printStrings('Hello', 'World');
}
```

Compliant solution

```
void myFunction(String prefix) {
  void printStrings(String s1, String s2) {
    print('$prefix: $s1[${s1.length}] $s2[${s2.length}]');
  }

  printStrings('Hello', 'World');
}
```
