Unused local variables should be removed
 Code Smell
Package names should comply with a naming convention
 Code Smell
Overriding methods should do more than simply call the

Analyze your code

Type parameters should not shadow other type parameters

Intentionality - Clear Maintainability ▾

 Code Smell  Minor ⓘ

Why is this an issue? More Info

Shadowing makes it impossible to use the type parameter from the outer scope. Also, it can be confusing to distinguish which type parameter is being used.

This rule raises an issue when a type parameter from an inner scope uses the same name as one in an outer scope.

Noncompliant code example

```
class TypeParameterHidesAnotherType<T> {  
  
    T method<T> () { // Noncompliant  
        ...  
    }  
  
}
```

Compliant solution

```
class NoTypeParameterHiding<T> {  
  
    U method<U> () {  
        ...  
    }  
  
}
```
