Dart static code analysis

Unique rules to write Clean DART Code

All rules **115**  Bug **15**  Code Smell **100**

- Void functions should not return null

- Function declarations should be preferred over variables

- Extension identifiers should comply with a naming convention

- Local identifiers should not start with underscore

- If-null operator should be preferred

- Null-aware operators should be preferred

- Generic function type aliases should be preferred

- Type parameters should not shadow other type parameters

- "static final" declarations should be "const" instead

- Interpolation should be used instead of String concatenation

- Collection literals should be preferred

- Conditional assignment should be preferred

Void functions should not return null

Analyze your code

Intentionality - Clear Maintainability ▾

 Code Smell  Minor 

Functions and methods with `void` return type should not return `null`.

- Why is this an issue?
- How can I fix it?
