Web-only libraries should only be used in Flutter web plugins	
Generic function type syntax should be preferred for parameters	
Null-aware assignments should make sense	
Unnecessary use of "toList" with spread operator	
Unnecessary braces in string interpolation should be removed	
Initializing formals should be used	
Spread collections should be preferred to chaining list insertions	
Inline list literals should be preferred to chains of insertions	
Pubspec urls should be secure	
Referenced packages should be listed as dependencies	
For elements should be preferred to Map.fromIterable	

Web-only libraries should only be used in Flutter web plugins

Intentionality - Complete Reliability

Code Smell Major

Web-only libraries should only be used in Flutter web plugins.

Why is this an issue? How can I fix it? More Info

The following libraries:

- `dart:html`
- `dart:js`
- `dart:js_util`

are not supported outside of a [web context](#).

Using them in a non-Flutter library or in a Flutter library that is not a web plugin may lead to runtime errors.

The rule reports an issue on any `import` statement that references one of the above libraries:

```
import 'dart:html';    // Non compliant
import 'dart:js';      // Non compliant
import 'dart:js_util'; // Non compliant
```

A non-Flutter library is identified as a library with a `pubspec.yaml` file that does not have a dependency on the `flutter` package:

```
dependencies:
  other_package: ^1.0.0
# Missing flutter dependency
```

A Flutter library that is a web plugin is identified as a library with a `pubspec.yaml` file that has a dependency on the `flutter` package and declares the web context, potentially among other platforms:

```
name: my_project
dependencies:
  flutter:
    sdk: flutter

flutter:
  plugin:
    platforms:
      web:
        flutter_web: any
        flutter_web_ui: any
  android:
    package: com.example.hello
    pluginClass: HelloPlugin
```
