Widget constructors should have a key parameter

 Code Smell

"**SizedBox**" should be used to add a whitespace to a layout

 Code Smell

Flutter widget "createState" should only return a new "State"

 Code Smell

@immutable classes should only have const constructors

 Code Smell

Const constructors should be invoked with const

 Code Smell

Web-only libraries should only be used in Flutter web plugins

 Code Smell

Generic function type syntax should be preferred for parameters

 Code Smell

Null-aware assignments should make sense

 Code Smell

Unnecessary use of "toList" with spread operator

 Code Smell

Unnecessary braces in string interpolation should be removed

 Code Smell

Initializing formals should be used

 Code Smell

Widget constructors should have a key parameter

Analyze your code

Intentionality - Complete Maintainability 

 Code Smell  Major 

Widget constructors should have a key parameter, forwarded to the superclass constructor.

Why is this an issue?

How can I fix it?
