Dart static code analysis

Unique rules to write Clean DART Code

All rules **115**

 Bug **15**

 Code Smell **100**

Tags

Impact

Clean code attribute

Search by name...

Wildcard variable shouldn't be used

 Code Smell

Relative lib imports should not be used

 Code Smell

Uninitialized variables and fields should be explicitly typed

 Code Smell

Types should not be used as parameter names

 Code Smell

Null checks in equality operators should be avoided

 Code Smell

Unnecessary character escapes should be removed

 Code Smell

Redundant type casts should be removed

 Code Smell

Empty constructor bodies should be replaced with a semicolon

 Code Smell

"switch" statements should cover all cases

 Code Smell

Ternary operators should not be nested

 Code Smell

Iterable "whereType" should be used to filter by type

 Code Smell

Fields that are only assigned in the constructor should be "readonly"

Wildcard variable shouldn't be used

Consistency - Conventional

Maintainability ⬆

 Code Smell

 Major ⓘ

Why is this an issue?

How can I fix it?

More Info

If the variable/parameter are supposed to be read, then give them a proper name.

Code examples

Noncompliant code example

```
void sayHello(String __) {
  print('Hello, $__!');
}
```

Compliant solution

```
void sayHello(String name) {
  print('Hello, $name!');
}
```
